Building a Secure Enterprise through Enhanced Protection of Information Assets

The exponential growth in connected devices, networks and information systems increase IT security infrastructure system's vulnerability to threats, espionage, and failures leaving businesses susceptible to information leakage, loss of revenue and brand image. Protecting the information assets through a robust security strategy that align with the organization's technology environment coupled with continuous risk assessment, evaluation, and mitigation help you respond effectively to evolving security and technology landscape at optimized costs.

Overview

Organizations today encourage BYODs for business efficiency and predict that around 70 percent of professionals would use mobile devices at work by 2018. The focus of information security is evolving from reactive response to proactive investigation and management of advanced threats. Businesses embracing new technologies including analytics, big data and cloud must align their security strategy to include continuous assessments and audits of infrastructure and an effective risk managed security strategy.

CIOs need to identify technology partners who can protect data assets and offer a clear information security transformation roadmap to the organization. It is also critical to balance the needs for cost efficiency with the increasing need for comprehensive security services across the infrastructure and application portfolio.

Top analyst predictions are:

- Information security market is likely to exceed \$125 billion by 2015
- By 2020, 75 percent of enterprises' information security budgets will be allocated for rapid detection and response approaches
- Information security budgets average \$8.7 million, a gain of 21 percent over last year

Security experts at GAVS consider the following as vital for increased information security:

- Continuous monitoring of security threats and extensive analysis of the security set-up
- Compliance with industry and country specific regulations
- Flexible and integrated security operations encompassing people, process, and technology
- Enhanced security policies covering mobile devices
- SLA and tools driven security monitoring

What We Offer

With extensive experience acquired over the years, servicing a diverse client base, our security offerings are aligned with the changing needs of organizations and their objectives. Our holistic offerings cover the complete security lifecycle while helping organizations incorporate latest technology trends such as mobility, social media, and analytics.

- Real time insights with complete visibility into the security measures
- Certified consultants and security experts with 15+ years in delivery security services combined with the right-set of security tools
- One stop solutions for industry related regulations and compliance policies

Managed Security Services

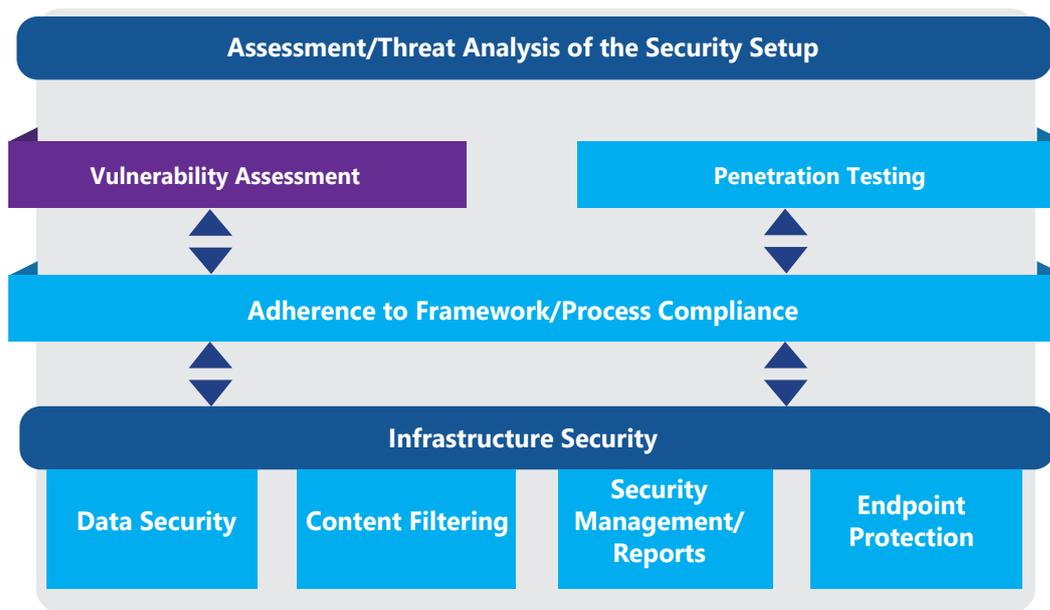

Managed security services offer comprehensive protection to information assets while constantly monitoring and upgrading the security environment to counter new threats. Firewalls, endpoint protection, content filtering policies, data leakage protection and Security Information and Event Management (SIEM) implementation are also key components of GAVS' managed security services.

As part of the managed security offerings we also help organizations improve the bottom line through securely embracing new technologies, mitigating cyber threats and regulatory compliance while demonstrating business value. This includes continuously monitoring existing security policies and implementing compliance changes and recommendations for improvement.

Security Framework

This framework has been built based on our strong understanding of the information security market and the current industry trends, threats, and security approach. It is aimed at helping organizations protect information assets and combat security threats.

We provide a flexible, deeply integrated framework that offers a far-reaching view of threats and evolves as quickly as conditions do. Our integrated approach is agile, and presents a full picture of threats by incorporating internal and external intelligence.

Security Assessment

The assessment kickstarts security initiatives and is vital to define key objectives and extract maximum value. A well-structured assessment identifies the internal and external vulnerabilities and evaluates if the right infrastructure, applications, and processes are in place. Any gap in your application or network architecture leaves your employees, customers and partners prone to multiple threats such as identity theft, fraud and data theft. Backed by strong domain experience, our consultants leverage business impact analysis and business support systems for the assessment. At the end of the assessment, we identify existing and future risks and outline strategies for mitigation.

Benefits

Our customers gain the following benefits from our security offerings:

- Comprehensive security approach to protect business operations and proprietary rights
- Reduced risks and the potential impact on business
- Reduced compliance costs through efficient information security management
- Improved return on investments from the security initiatives
- Prevention of revenue and data loss
- Improvement of security incident detection through continuous monitoring and analysis of data activity

About GAVS

GAVS Technologies (GAVS) is a global IT services & solutions provider enabling digital transformation through automation-led IT infrastructure solutions. Our offerings are powered by Smart Machines, DevOps & Predictive Analytics and aligned to improve user experience by 10X and reduce resource utilization by 40%.

GAVS has been recognized as a Cool Vendor by Gartner in 'Cool Vendors in ITSM 2.0, 2016' and positioned as an 'Aspirant' in Everest Group PEAK Matrix™ for Healthcare Provider IT Services. GAVS was also rated as a prominent India-based Remote Infrastructure Management player & one of the key small players serving the mid-market & enterprise clients in North America by Gartner.
